

## Why use **MIRIL** fryliquid™?

**fryliquid™ is about better fried food! Your food will taste better and look better.**

**Your food will cook faster . . . with hotter centers.**

**You will save money . . . because you will discard less oil . . . and the food will absorb less oil.**

Without *fryliquid™* Progressive Diminished Quality of food sets in as your oil gets older.

With *fryliquid™* you are able to prevent PDQ so the oil is always good.

### What is *fryliquid™*?

### Is *fryliquid™* safe to use?

This revolutionary product is a “cocktail” of natural ingredients that are found in food.

### How does *fryliquid™* work in my fryer?

*fryliquid™* provides an antioxidant that acts like a “vitamin” to protect your oil against breakdown **while** you are cooking. Almost every oil contains synthetic antioxidants that work while the oil is waiting to be added into the fryer.

You need *fryliquid™* because these synthetic antioxidants burn up as soon as you fry!

### Why are the benefits of *fryliquid™* so different?

Other products try to treat oil when you filter. *fryliquid™* protects frying oils **while** you fry. This assures premium oil performance and longer oil life. When you use *fryliquid™* and oil management for Optimum Frying: the oil never smokes - the oil never foams - you avoid carbon and gum deposits and the oil is always good.

### When do I add *fryliquid™*?

Add *fryliquid™* according to instructions on the label.

Before each meal session; breakfast, lunch and dinner is preferred.

### What if I use too much *fryliquid™*?

Tests with double and even triple size portions were found to give extra value.

There are no adverse effects from adding larger quantities to the oil.

Choose the portion that matches how you want the food to cook.

### What if I don't use enough *fryliquid™*?

The product can't work if you don't use it . . . or . . . if you don't use enough *fryliquid™*.

You should use the suggested “portion” to receive the best value from your oil and from *fryliquid™*.

## How much *fryliquid™*?

Choose the portion according to the amount of oil in your fryer

### Choose the “B” size portion

If your fryer holds 50 to 60 lbs or 28 to 34 quarts or 26 to 32 litres

A full “B” size portion amount is between 2 thick or 2 thin lines on the label.

If your fryer holds  $\frac{1}{2}$  as much oil as listed above, then use  $\frac{1}{2}$  of the “B” size portion.

The  $\frac{1}{2}$  portion is between a thicker line and a thinner line on the label.

### Choose the “C” size portion

If your fryer holds 35 to 40 lbs or 20 to 24 quarts or 19 to 23 litres

A full “C” size portion amount is between 2 thick or 2 thin lines on the label.

If your fryer holds  $\frac{1}{2}$  as much oil as listed above, then use  $\frac{1}{2}$  of the “C” size portion.

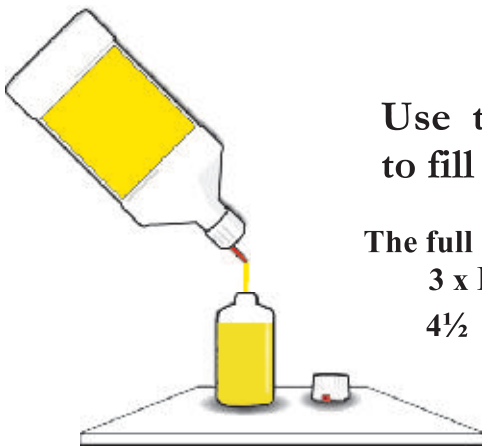

The  $\frac{1}{2}$  portion is between a thicker line and a thinner line on the label.

Between a thicker and thinner line for  $\frac{1}{2}$  portion

A FULL portion is equal to 2 x  $\frac{1}{2}$  portions

Use the large bottle  
to fill the small bottle

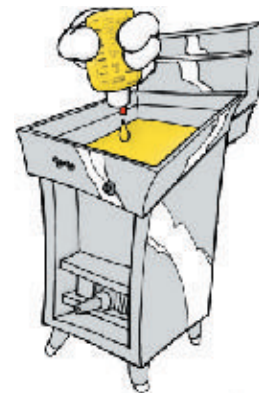

The full small bottle contains:  
3 x B size portions or  
 $4\frac{1}{2}$  x C size portions

Use the small bottle to add *fryliquid™* to the oil

**Hold the small bottle 12” above the oil**  
when you add *fryliquid™* into the fryer

Squeeze the small bottle gently until the  
portion matches the size of your fryer.

Use the big bottle to fill the small bottle.

**NEVER pour *fryliquid™* into the fryer from the big bottle!**

The small bottle dispenses and measures the proper portion.
